---

Well after posting on 6 forums so far with no answers and my hosting company goDaddy leaving me to fend for myself I am really down and hope that someone can offer just the slightest bit of guidance.

Win03 server

Virtuozzo VPS

goDaddy

logging onto server via Win XP's remote desktop (by IP)

-tried to install McAfee VirusScan 8.0i- could not contact filter driver

-tried to install PerfectDisk 7- cannot communicate with PDengine

-tried to install Alcohol120, installation error

-tried to install DAEMON tools- setup required reboot but on restart install would not complete.

CAN SOMEONE PLEEEASE ADVISE THE NATURE OF INSTALLS ON VPS AND what is going on here?

very grateful-
