Sort of. We wanted to copy the /vz/root, along with all other /vz/* directories, to shared storage while VEs were up. Then rebuild the box and restore the directories from shared storage to the same system.

We're just curious about this. If we have to stop the VEs to do the /vz/root directory then so be it.

Is the migration feature even available to us with what we have installed?

Linux 2.6.16-026test017.1-smp #1 SMP Fri Aug 4 19:46:09 MSD 2006 x86_64 x86_64 x86_64
GNU/Linux

vzctl-3.0.10-1

vzctl-lib-3.0.10-1

ovzkernel-smp-2.6.16-026test017.1

vzquota-3.0.0-7

Thanks,
Derrick
