## [QUOTE

]192.168.0.10 is detected on another computer : 00:01:f4:0c:18:fb [/QUOTE]

This means, that there is another computer in your network that uses IP address 192.168.0.10. As you understand there shouldn't be two computers with same IP address in one network.

## Quote:

should there be a modprobe.conf file in the vps??

No, it shouldn't. No kernel modules can be loaded in VE, it's only permited in VE0. Hence modprobe.conf file is useless.

HTH, vass.
