We have the same issue but with Teamspeak running in our VPS'es..

After we did the latest update to OpenVZ yesterday we can not start a single teamspeak server for our customers anymore.

Teamspeak is using an SQL Lite Database.

Thats what i get from strace:

```
strace ./server_linux  
execve("./server_linux", ["/server_linux"], [/* 10 vars */]) = 0  
+++ killed by SIGKILL +++
```

Daniel
