We have the same issue but with Teamspeak running in our VPS´es..

After we did the latest update to OpenVZ yesterday we can not start a single teamspeak server for our customers anymore.

Teamspeak is using an SQL Lite Database.

Thats what i get from strace:

strace ./server_linux
execve("./server_linux", ["./server_linux"], [/* 10 vars */]) = 0
+++ killed by SIGKILL +++

Daniel
