A couple of minor changes to th openvzmon tool.

- 1) Bug fix with debug file. File was be created (empty) even when the -o option wasn't given. This has been corrected.
  - 2) Monitor now displays memory usage immediately upon execution. Before, it would wait until it had cpu statistics to report as well before displaying memory stats.
  - 3) Added a new flag (-m) that, when provided, will only display the memory usage by the system and then immediately terminate. This is for the times when you need to know memory usage only and don't want the delay in cpu stat calculation or to be forced to terminate the application manually.
