
Subject: [PATCH 6/13] BC: kmemsize accounting (core)

Posted by [dev](#) on Thu, 09 Nov 2006 16:53:38 GMT

[View Forum Message](#) <> [Reply to Message](#)

Introduce BC_KMEMSIZE resource which accounts kernel objects allocated by task's request.

Reference to BC is kept on struct page or slab object.

For slabs each struct slab contains a set of pointers corresponding objects are charged to.

Allocation charge rules:

1. Pages - if allocation is performed with __GFP_BC flag - page is charged to current's exec_bc.
2. Slabs - kmem_cache may be created with SLAB_BC flag - in this case each allocation is charged. Caches used by kmalloc are created with SLAB_BC | SLAB_BC_NOCHARGE flags. In this case only __GFP_BC allocations are charged.
