both systems have VZ running, esp from the secondary to the primary since it hosting 19 other VMs

The VM version on the main (was):

```
[harpalyke ~]$ rpm -qa |grep vzctl  
vzctl-lib-3.0.10-1  
vzctl-3.0.10-1
```

but since has been updated to match the secondary, which is:

```
[othosie ~]# rpm -qa |grep vzctl  
vzctl-lib-3.0.12-1  
vzctl-3.0.12-1
```

Distribution on both systems is CentOS4 for the host and VMs
