
Subject: OpenVZ and VMWare or Parallels on the same host?

Is it possible to load VMWare kernel modules into an OpenVZ kernel and run VMWare on the host? Is it possible to use Parallels alongside OpenVZ? I mean on the host, not in the guests.

Would such a setup require a special network configuration? What if I put two Ethernet adapters into the box? Could I use one interface for OpenVZ and the other one for VMWare or Parallels?
