---

Has anyone had any luck getting Edgy Eft to work inside a VPS?

If I'm using the old sysvinit-package from edgy then some parts like networking won't start at boot - I have to start the init-script manually... When using Edgy Eft's default init-daemon, 'upstart', the VPS won't boot at all... well, it starts but after mounting all local volumes it looks like as if the init process is shutting down - and so is the vps.
