
Subject: How to run a script on HN after VPS start

I am needing to run some commands automatically on the HN after a specific VPS has started. Using 123.mount doesn't work because it is run too early. 123.start doesn't work because it is run inside the VPS instead of on the HN. Is there a way to do something similar to 123.start, but have it run on the HN? It needs to run after all the network devices for the VPS have been initialized.
