Subject: Re: How to run a script on HN after VPS start
Posted by duswil on Sat, 18 Nov 2006 18:48:55 GMT

I really don't want to, but I could alter the vznetcfg script to run 123.netcfg (a custom script), which would pretty much do the job. I just don't really want to alter OpenVZ-provided scripts that might be upgraded in the future, which would overwrite my changes.

I'm hoping there is a "good" way to do this.
