Hello,

We are getting following error while starting VPS.

```
-----  
Unable to create lock file /vz/lock/119.lckBhM5yX, use --skiplock option:  
Read-only file system  
Unable to lock VPS  
-----
```

Currently VPS shows as mounted.

We have CentOS release 4.4 installed on the server and
"2.6.8-022stab078.14-enterprise #1 SMP" openvz kernel.

If anyone knows the reason why this is happening, please assist.

Best Regards,
Swapnil
