I found some postings with Google about people having the same problem.

http://list.linux-vserver.org/archive/vserver/msg01363.html

I did it this way, and now it SEEMS to work. I will test again (with hard - reboot and so on). If it works, and all works fine, i will publish my Suse-9.3-Image soon for the public so everyone can use it.

Thanks for your help, Kir
Regards,
Ronny
