Hi,

I have installed a Samba server in a VPS.

It need to send broadcast packets, but they don't go out to the network with both venet and veth interfaces.

Have someone found this problem or is a misconfiguration of my VE?

I have followed this how-to:

http://wiki.openvz.org/Virtual_Ethernet_device

Both VE0 and VPS are ubuntu 6.06
kernel 2.6.16-026test017

Ciao.
