Subject: OpenVZ and (gr)security
Posted by dermax on Mon, 27 Nov 2006 19:34:33 GMT

Hi,

I'd really like to use OpenVZ productive, but somehow I miss the features of grsecurity, like the ability to disallow users to see _all_ processes running, it's afaik some /proc setting.

My plan is to virtualize a shell server, and of course it's stupid if every customer sees whats running on the VE - so therefore 'top', 'ps aux' should be restricted that the shell users can only see their own processes.

I always achieved that by using grsecurity, but grsec unfortunately doesn't work in combination with OpenVZ

It would be great if someone has an idea to solve this problem.

Thank you!
