Thanks!
Still don't get it

My situation of the HN / VE
HN powernode = 204589
VE cpuunits = 120000

Now the guide cpulimit: (allowed VPS CPUUNITS/CPU power)*100%.
Becomes: $(120000/204589)*100\% = 0,344$

I don't see the link for the value 200 / 400 for cpulimit.
Or am I doing/reading something wrong?
