I guess i'm loosing something, but have no idea what!

VE privvmpages

```
privvmpages    116278    167769    256000    262144    0
```

Setting VE meminfo with the same value as privvmpages

```
[root@vps1 ~]# vzctl set 130 --meminfo privvmpages:1 --save
```

Checking memory usage inside VE

```
root@server [/]# free -m
      total    used    free   shared  buffers   cached
Mem:      1000     286     713       0        0        0
-/+ buffers/cache:      286     713
Swap:      0        0        0
```

Since there are 116278 (privvm)pages in use which means 454MB why 'free' output gives 286MB?

Thanks in advance,
