Actually it should work or at least it works for me.
Centos-4-i386-minimal template contents /etc/rc6.d/S00vzreboot file. This script works while you're rebooting VE:

```
#!/bin/bash
>//reboot
```

You can ensure yourself, that after executing "reboot" in VE, /reboot file appears in VE (this is /vz/private/<veid>/reboot file on HN). Then you should wait for 5 minutes (maximum) and VE will start again.

But don't forget to check, that crond is working on your node!

HTH,
Vasily.
