Hi

seems to be, that the Kernel doesn't Support your SATA-Driver.

To-Do:

- a) Load the Kernel Sources for 2.6.8
- b) Install Patch from openvz
- c) Load default .config file from openvz for the kernel
- d) make menuconfig and choose the correct sata-driver, too
- e) build your kernel
- f) pray to god that it will work

Regards,
Ronny
