---

- 1) `file /boot/vmlinux-2.6.9-023stab032.1-smp` output
- 2) full /etc/grub.conf content
- 3) `file /boot/vmlinux-2.6.9-42.0.3.plus.c4smp` output

Am I right, grub prints error when it is triyng to load kernel itself?
