I downloaded vzyum-2.4.0-11.noarch.rpm and tried to install it on my centos 4.2 86_64 box, it complains with;

```
[root@services ~]# rpm -Uvh vzyum-2.4.0-11.noarch.rpm
warning: vzyum-2.4.0-11.noarch.rpm: V3 DSA signature: NOKEY, key ID a7a1d4b6
error: Failed dependencies:
        cElementTree.so is needed by vzyum-2.4.0-11.noarch
```

I have the necessary shared lib here;

```
root@services ~]# locate cElementTree.so
/usr/lib64/python2.3/site-packages/cElementTree.so
```

I also tried rebuilding with the src.rpm and it still does the same, then I tried rpmbuild --target x86_64. All failed.

Any ideas ?

Bards.
