Hello,

Here is my second question regarding openvz project.

I'm doing upgrade my kernel from 2.4.21 to the latest openvz kernel 2.6.18-028test007.1, it works can boot without any problem.

But i realize that one of my application which using RSH to connect to my router and doing some ping test : (rsh -l root [my_router] ping [my_other_router]), having error.

It said : "Rsh : Cannot assign requested address"

And when i rollback to the old kernel, it working normal.

I have following openvz user guide including setting sysctl.conf, but it wasn't work. Maybe somebody can suggest me how to overcome this problem.

Thanks,

MBG
