I was trying out the testing kernel on one of my testing servers. This is what was given to me when I try to install.

```
[root@SVR098 ~]# rpm -ivh kernel-2.6.18-ovz028test007.1.i686.rpm
```

```
error: Failed dependencies:
```

```
kernel >= 2.6.10 conflicts with lksctp-tools-1.0.2-6.4E.1.i386
```

I have a production environment and I say OpenVZ rules.
