Quote:Can I do Cpanel as template as I setup it when I create VPS account at short time ?

Yes, this is what I do. Create a centos VE. Install Cpanel into it and apply and modifications, tweaks, security enhancements, configurations that you like. Then, stop the VE and create a tar.gz of the private directory like any other VE template and put it in /vz/template/cache

Then, you can create additional VEs using the same template and not need to install yum, cpanel, etc everytime. What a time saver!

Rick
