Subject: Re: SSH stop responding on host node
Posted by rickb on Thu, 14 Dec 2006 08:25:20 GMT

OK, I see now. When you said:
"When I try to connect to ssh on the host node"
You meant using ssh from the HN to the VE. Metrics numfiles, kmemsize, privvmpages
exhaustion would all explain why any software malfuncitons in a VE. To verify:

cat /proc/user_beancounters

and paste here. All you need to do is raise the limits for the failcnt'ing metrics, understand how
much resources your applications need and give them more then that. Have you read the UBC
page in the wiki?
