I just tried to reproduce it in a recent kernel, and it does show something very close to what you reported. Using 5 threads, 2 of them sharing the same file, the 3 first threads get 6067 -> 6182KiB/sec each, and the two threads sharing a file get 975KiB/sec each. That's really bizarre, I'll take a good look at this! Thanks for reporting it.
