Subject: Meminfo again
Posted by sspt on Wed, 20 Dec 2006 21:25:39 GMT

Is there any way to show privvmpages held instead of oomguarpages held when we execute 'free -m' inside a VE?

For example a VE using 300MB RAM (Privvmpages) will appear as only 60MB (OOmguarpages).

Since we can set meminfo as privvmpages:1 it should show privvmpages
