Right. So just try it

I just try it, result:
If I exec vzpkgcache, get error message:

# vzpkgcache
Creating cache for fedora-core-4-i386-default OS template
There was a problem importing one of the Python modules
required to run yum. The error leading to this problem was:

    /usr/share/vzpkgtools/vzrpm44/lib/python2.4/site-packages/rp m/_rpmmodule.so: cannot open
shared object file: No such file or directory

Please install a package which provides this module, or
verify that the module is installed correctly.

It's possible that the above module doesn't match the
current version of Python, which is:
2.4.1 (#1, May 16 2005, 15:15:14)
[GCC 4.0.0 20050512 (Red Hat 4.0.0-5)]

If you cannot solve this problem yourself, please send this
message to <yum@lists.linux.duke.edu>.

ERROR: yum failed with 1 exit code
