
Subject: wtmp growth abnormal?

I am running 7 vps on top of gentoo (all gentoo templates as well). I was noticing my free space going down rapidly and I looked at the big files on the system and every vps had a 1.5 GB wtmp file. Is there something I am doing wrong that creates such a large wtmp over time. I deleted one and sure enough, in about an hour it was already 5.0 MB.

Any ideas?

Thanks,
Curtis
