> same node, is this correct?
what do you mean by "see"? it depends on what you put into this word.
e.g. one VE can connect to another via TCP/IP networking and thus see it :)
But I guess you mean that one VE is isolated from another and
VE owner can't affect/crack/change/abuse/... another VE, correct?
Then you are right.

> Qmail with the other two undecided as yet.
no problem with this setup so far.

> I need to being a second node online to run the DNS from?
no problem with running DNS server inside VE.

Thanks,
Kirill
