Subject: Re: OpenVZ and Bastille/iptables?
Posted by marsvin on Sun, 24 Dec 2006 15:18:08 GMT

I just tried messing around with it some more and now it works! It turned out simply adding forward/accept rules to each of the VPS was necessary. Thanks a lot for keeping me on track guys.

For anyone else reading this and looking for the same thing, I created this file: /etc/Bastille/firewall.d/post-rule-setup.sh (in VE0) and added these lines:

iptables -A FORWARD -p tcp -d 10.0.0.101 --dport 22 --syn -j ACCEPT
iptables -A FORWARD -s 10.0.0.101 -j ACCEPT

This is accepting all outbound connections from my VPS and inbound for ssh. Very nice
