I recomend to choose between 2.6.9 or 2.6.18 series.
2.6.18 - is testing (development) series, new features will be added there. It's quite stable however.
2.6.9 - is stable, no new features, only bug fixes.

After choosing 2.6.9/2.6.18 go to
http://wiki.openvz.org/Different_kernel_flavors_%28UP%2C_SMP
%2C_ENTERPRISE%2C_ENTNOSPLIT%29
to choose kernel flavor.

HTH,
Vasily.
