A few hours ago my node goes down and fschk has found some corrupt data which recovered, now when i try to start quota i get the following:

```
[root@vps1 140]# vzquota on 140 -f
vzquota : (warning) Incorrect quota shutdown for id 140, recalculating disk usage
vzquota : (error) quota check : lstat Pj¥*': No such file or directory
```

How can i sort this problem out?
