Subject: Slow vz start/stop
Posted by dagr on Mon, 08 Jan 2007 10:26:32 GMT

I have about 60 VPSs , and when i do /etc/init.d/vz stop/start - it s a pain for me. Its so slow ,130s for stop and 120 for start . Ordinary VPS start takes 2s (3s with dropped quota) and stop - 7. I checked this script , and noticed that it stops parallely 4 VPS by default, so the question is - is it ok to stop them all paralelly at once ? And is there any problem to make start parallel as well ?
