---

I installed openvz in a debian etch as described at  
[http://wiki.openvz.org/Installation\\_on\\_Debian#Etch\\_.28testing.29](http://wiki.openvz.org/Installation_on_Debian#Etch_.28testing.29)

But openvz fails when I execute /etc/init.d/vz start

Any pointers?

However, on a server running centos4.4, openvz gets installed very easily.
