
Subject: NFS Outside ve

Posted by [ready](#) on Mon, 15 Jan 2007 15:11:17 GMT

Hi,

i'm planning to mount the whole vz directory through nfs.

The idea behind the scenario is having the vz directory stored on a raid5 nas server and several boxes running vz kernel which can run a ve from nas vz tree.

So i can easily swich one ve to another box if the load on the box is too heavy.

I did that by the following way:

I have set up a box with the vz stuff and tested the ve's.

Then i rsynced the /var/lib/vz directory to the nas server.

I exported /srv/vz by:

```
/srv/vz          box*(rw,sync,no_root_squash,no_all_squash,subtree_check)
```

I mounted the /srv/vz to a vz box by:

```
mount nas1:/srv/vz /var/lib/vz
```

And started one ve. Now, i get some really strange behavoir:

```
box1:~# vzctl start 500
```

```
Removing stale loroot@auth:/#ck file /var/lib/vz/lock/500.lck
```

```
Starting VE ...
```

```
VE is mounted
```

```
Adding IP address(es): 192.168.66.199
```

```
Setting CPU units: 1000
```

```
Set hostname: auth
```

```
File resolv.conf was modified
```

```
VE start in progress...
```

```
box1:~# vzctl enter 500
```

```
entered into VE 500
```

```
root@auth:/# l
```

```
total 80
```

```
drwxr-xr-x  2 root root  4096 Dec 18 08:27 bin
```

```
drwxr-xr-x  2 root root    6 Dec 15  2004 boot
```

```
drwxr-xr-x 11 root root 24576 Jan 15  2007 dev
```

```
drwxr-xr-x 47 root root  4096 Jan 15  2007 etc
```

```
drwxrwsr-x  2 root staff    6 Dec 15  2004 home
```

```
drwxr-xr-x  2 root root    6 Dec 20  2005 initrd
```

```
drwxr-xr-x  9 root root  4096 Nov 24 11:40 lib
```

```
drwxr-xr-x  2 root root    6 Dec 20  2005 media
```

```
drwxr-xr-x  2 root root    6 Dec 15  2004 mnt
```

```
drwxr-xr-x  2 root root    6 Dec 20  2005 opt
```

```
dr-xr-xr-x 76 root root    0 Jan 15 15:37 proc
```

```
drwx-----  3 root root  111 Jan  2 17:21 root
```

```
drwxr-xr-x  2 root root  4096 Dec 18 08:27/sbin
```

```
drwxr-xr-x 2 root root 6 Dec 20 2005 srv
drwxr-xr-x 11 root root 0 Jan 15 15:37 sys
drwxrwxrwt 2 root root 6 Jan 15 2007 tmp
drwxr-xr-x 11 root root 107 Nov 16 08:54 usr
drwxr-xr-x 14 root root 138 Nov 17 12:19 var
root@auth:/# logout
exited from VE 500
```

i got logged out automatically after i listed the directory.
It doesnt matter what i type, i always get logged out after the first command when i enter the fresh started ve.

Well, i reenter:

```
box1:~# vzctl enter 500
entered into VE 500
root@auth:/# ps a
  PID TTY          STAT TIME COMMAND
 4880 pts/0    Ss   0:00 -bash
 4984 tty2     Ss+  0:00 /sbin/getty 38400 tty2
 4985 tty3     Ss+  0:00 /sbin/getty 38400 tty3
 4986 tty4     Ss+  0:00 /sbin/getty 38400 tty4
 4987 tty5     Ss+  0:00 /sbin/getty 38400 tty5
 4988 tty6     Ss+  0:00 /sbin/getty 38400 tty6
 6724 tty1     Ss+  0:00 /sbin/getty 38400 tty1
14730 pts/1    Ss   0:00 -bash
14734 pts/1    S+   0:00 less /var/log/syslog
14778 pts/0    R+   0:00 vzctl enter 500
15804 pts/0    Ss   0:00 -bash
root@auth:/#
```

The really strange thing is that i get the whole process tree, now only the ve processes!!

I leave the ve:

```
root@auth:/# logout
exited from VE 500
box1:~#
```

And i want to shut down the VE:

```
box1:~# vzctl stop 500
Stopping VE ...
```

Connection to box1 closed by remote host.
Connection to box1 closed.

Now the whole System hangs up!

Are the problems known and are they going to fixed?
And if not, which alternatives there are to get the above described scenario?

Some infos:

vz kernel: 2.6.18-028test010.1-ovz-smp

system: Debian etch

Filesystem: xfs

Any help appreciated

Greets
