Subject: *SOLVED* What does this meen? --> Inappropriate ioctl for device
Posted by Guido64 on Tue, 16 Jan 2007 01:35:09 GMT

Hello list,

Last night I did a "apt-get update && apt-get upgrade" on my host and several vps systems.

Several security updates where downloaded and installed.
Since then no vps is starting anymore.

The error messages I receive are:

2007-01-16T02:37:57+0100 vzctl : Setting CPU units: 1000
2007-01-16T02:37:57+0100 vzctl : WARNING: Settings were not saved and will be resetted to original values on next start (use --save flag)

2007-01-16T02:37:58+0100 vzctl : VE 101 : VE is unmounted

I did a clean (debian 3.1) installation on the host system but the problems stil the same.
Please help!
