Hi,

Currently we use virtuoizzo on a few system and I had a couple questions about the openvz implimentation.

- 1.) How well does it handle namebased VEs. On virtuoizzo you can have multiple VEs share the same IP simular to how apache does namebased vhosts
- 2.) What significant differences are their in backing up and migrating VE from 1 hardware node to another.
- 3.) Is there any GUI interfaces for this project at all yet?

Thanks

Miles
