$ vzctl set 101 --veth_add veth101.0, a_made_up_MAC_address, eth0,
a_made_up_MAC_address+1 --save

As I can see you have spaces in this line after commas, please try following command:
$ vzctl set 101 --veth_add
veth101.0,a_made_up_MAC_address,eth0,a_made_up_MAC_address+1 --save

Also am I right in thinking I need to use a veth device (as opposed to a venet) to run a DHCP
server in a VE?

Yes, you need to add veth device to VE to be able to run DHCP server in it.
