Hello!

I thought i had understand the output of vzmemcheck. But at the moment i believe - i don't...

Output:

```
vzmemcheck -A -v
```

```
Output values in Mbytes
```

```
veid      LowMem LowMem   RAM MemSwap MemSwap  Alloc  Alloc  Alloc
          util  commit  util  util  commit  util  commit  limit
181       5.44  16.13 271.68 271.68 266.13 393.26 266.13 2016.13
```

So this VPS has a Commit of 266.13 - how can the VPS use 271.68 ?

Stefan
