I'm also seeing large load spikes on my host server. My VEs can all be idle and it still happens.

Nothing in any log files except the maillog which says: "rejecting connections on daemon MTA: load average: 14".

The CPU usage is mostly idle (it can be 70% idle, even during the load spikes), but the load spikes up to 14 or so at random times for a few minutes a couple times a day.

\$ vzmemcheck

Output values in %

LowMem	LowMem	RAM	MemSwap	MemSwap	Alloc	Alloc	Alloc
util	commit	util	commit	util	commit	limit
