Hi , i have a server with centos 5.7 and openvz ft kernel RHEL 5 . now i must buy a new server and move my vps's from old server to it . now i want know what's your offer for os and kernel version of new server ? centos 6 and openvz ft kernel RHEL 6? or both of them with old version (5) ? (offer for more security, stability and performance) thank you
