Hi all,

I am running a OpenVZ on RHEL 5.1 witch kernel 2.6.18-*, I tried to upgrade using "rpm -Uvh" and "yum update", both have errors but I still can restart with the new kernel.

So, can anyone tell me that kernel can be upgraded from 2.6.18-* to 2.6.32-*? Or it is not recommended?

Below are errors that during upgrade.

```
# uname -r
2.6.18-92.1.18.el5.028stab060.2PAE

================================================
upgrade using rpm
================================================

# rpm -Uvh vzctl-3.0.29.3-1.i386.rpm  vzctl-lib-3.0.29.3-1.i386.rpm
vzkernel-2.6.32-042stab037.1.i686.rpm  vzkernel-firmware-2.6.32-042stab037.1.noarch.rpm
vzquota-3.0.12-1.i386.rpm

I search around in the internet, someone said using 2.6.32 on RHEL5 requires to set something in /etc/grub.conf, and someone said 2.6.32 is not recommended to run in RHEL5...

So can anyone advise if it is not recommended? Or we can go ahead with bypassing the error?
