i buy a vps with kernel 2.6.9-022stab078.14-smp. but ... modprobe ipv6

FATAL: Could not load /lib/modules/2.6.9-022stab078.14-smp/modules.dep: No such file or directory

can you help me?

So you're giving this command inside the vps?

```
# modprobe ipv6
```

If so, this is prohibited inside VPS to load modules for security reasons.

Module should be loaded on the HN.
