Hi,

Today I got a kernel panic , cant find any proper logs on server. Server RHEL6 , kernel 2.6.32-042stab037.1 . This is all I have

Is there anybody faced with this problem ? Screenshot attached on post.

Thanks advance!

See openvz bug 2041 (the forum does not allow me to post a link)

Try the latest kernel from rhel6 testing.

That patch only appears to fix problems with kernels after 37.1
