Subject: CT restarts instead of stopping

Hello

I have the problem, that a CentOS 5.5 Container (CentOS-55-32-minimal template) on a CentOS 5.7 Node does not stop if I tell him.

I do a

```
vzctl stop CTID
```

and then it restarts.

Cannot see anything suspect in the logs. I can enter the CT and stop or restart the services inside of it but not stop the container.

What's the problem here?
