No it is fine, the userspace tool is broken.

NACK!

This is a perf userspace bug, not a kernel one. Please fix the userspace tool instead.

Note, the new version of libparseevent handles this case without issue.
Perf just needs to be updated.

I don't understand. I've got

git://git.kernel.org/pub/scm/linux/kernel/git/rostedt/trace- cmd.git

and it reports the same error. Where am I wrong?

./trace-cmd report 2> log

```
<idle>-0 [001] 1516333.292126: sched_switch: [FAILED TO  
PARSE] prev_comm=kworker/0:0 prev_pid=0 prev_prio=120 prev_state=0x0  
next_comm=trace-cmd next_pid=2900 next_prio=120
```

cat log

trace-cmd: No such file or directory

Error: expected type 5 but read 4

Error: expected type 4 but read 0

failed to read event print fmt for sched_switch

trace-cmd: Received SIGINT

Ah, I tested on a kernel without the updated format field.

But I still stand that the tool is broken and not the kernel.

I'll update both trace-cmd and perf to handle this breakage. Sad that I still need to update two locations :(

Add the below patch to trace-cmd and see if it fixes the issue. I'll start working on something that fixes perf too.

Thanks,

Can you try this patch on perf. It's untested (not even compiled tested)

Hi Steve,

```

>

It looks like it works now. Thanks.
