Hi all,

I'm having this kernel error on my messages logs. Last day I got my server down because of that (not sure) . I have searched this and found that already has a kernel patch.

I think this is the bug ;
bugzilla.openvz.org/show_bug.cgi?id=1954

Is there tutorial how to apply patch simply , or is it already patched on new releases ?

Currently using Centos 6 64 bit and 2.6.32-042stab039.11 kernel.

Thanks advanced!

Error Output

Nov 19 06:55:37 cube2 kernel: [13196.056354] Core dump to /usr/libexec/abrt-hook-ccpp
/var/spool/abrt 4243 8 0 0 pipe failed

Nov 19 07:05:58 cube2 kernel: [13814.958246] Core dump to /usr/libexec/abrt-hook-ccpp
/var/spool/abrt 4424 8 0 0 pipe failed

Nov 19 07:16:09 cube2 kernel: [14424.472190] Core dump to /usr/libexec/abrt-hook-ccpp
/var/spool/abrt 4595 8 0 0 pipe failed

Nov 19 07:21:19 cube2 kernel: [14733.994569] Core dump to /usr/libexec/abrt-hook-ccpp
/var/spool/abrt 4679 8 0 0 pipe failed

See bug 2090, about /usr/libexec/abrt-hook-ccpp too.

grab patch available in bug report, store them in (rpm) fileSOURCES/linux-kernel-test.patch
and rpmbuild the new version.

Bug report 2090 say stopping daemon abrt-d bypass the problem.

Hope this help.

Hello,

I am having the very same problem.

Regarding your assumption (that this is the cause of the hang) i have verified that this happens every time before the server crashes.

Help solving this would be greatly appreciated.

Thank you!

Ezequiel
