Hello,

I'm using the following commands to reload and VPS:

```
/usr/sbin/vzctl exec $id shutdown now
```

```
/usr/sbin/vzctl stop $id
```

```
/usr/sbin/vzctl destroy $id
```

```
/usr/sbin/vzctl create $id --ostemplate $template --config $config
```

```
/usr/sbin/vzctl set $id --onboot yes --save
```

```
/usr/sbin/vzctl set $id --hostname vps.bulk-hosting.net --save /usr/sbin/vzctl set $id --ipadd $ip  
--save
```

```
/usr/sbin/vzctl set $id --nameserver 83.133.85.85 --save
```

```
/usr/sbin/vzctl start $id
```

```
/usr/sbin/vzctl exec $id service sshd start
```

```
/usr/sbin/vzctl set $id --userpasswd root:$password
```

When i execute

```
/usr/sbin/vzctl stop $id
```

Stopping VPS ...

You can skip locking using --skiplock option of vzctl.

This, however, is not recommended. It is better to find out what's going on. Lock files are located in /vz/lock/ directory. Can you find out after which command this lock remains?

Thanks!
